

SCIU JUNIPER

Small parts & torques

No.	Description	Dimension	Torque (max)
1	stem hardware	M5xP0.5	6 Nm
2	fork thru axle	M12xP1.5	10 Nm
3	frame hardware	M5xP0.8	5 Nm
4	seat clamp	M8xP1.0	7 Nm
5	dropout	M3xP0.5	1.2 Nm
6	rear thru axle	M12xP1.5	10 Nm

We like it simple! Please have a look at the frame drawing and the corresponding table. There you will find the part / torque you are looking for.

Every screw on our frames has a certain torque! We ask you to note this! Improper assembly and ignoring the maximum torque will result in damage to or destruction of the frame. These are not covered by the warranty! All screws must also be secured with a liquid screw lock (medium strength)! So check the torque and if you have any questions, simply contact our team.
